

V500 features

Features:

- calling card PIN can be set without STK PIN (great for calling card providers)
- auto select any of 2 access numbers when calling
- callback and callthrough can work at same time
- can be set by sending SMS remotely, best for big quantity
- when providers have lot of users, they can set up access number before selling. Access number is protected by STK PIN. When users buy the sim dialer, they can set calling card's PIN themselves, no need to enter STK PIN, because calling cards PIN is not locked by STK PIN
- callback and callthrough can be set at same time, and sim dialer auto select access 1 or access 2 according to activation prefix
- for big providers, that have lot of users in different cities, if they need to change the preset access number, they can use the SMS remote setting feature, send SMS by SMS modem+PC software. Then they can reset all users sim dialers remotely.
